- AI Agents
- Automations
- Social Media Management
- JavaScript
- Node.js
- Core PHP
- SQL
- React.js
- Chakra UI
- MongoDB
- Supabase
- REST APIs
- Responsive Web Design
- Git & GitHub

• PROFILE SUMMARY

AI Agents & Automation expert — I design autonomous agents that run customer support and complex business operations end-to-end, and build automation pipelines that connect business tools and social platforms to cut out repetitive manual work and reduce operating costs. I also manage and automate social media accounts, keeping content, scheduling, and engagement running without manual upkeep. Alongside that, I'm a full stack developer fluent across the JavaScript ecosystem, building production-grade interfaces and APIs with React.js, Node.js, MongoDB, SQL, Supabase, and core PHP. 1 year and 2 months of professional remote experience delivering client-facing websites and portals end-to-end. BSCS graduate focused on AI Agents, Automation, and full stack development.

• EDUCATION

- **Intermediate (FSc / Pre-Medical)**

Punjab Group of Colleges (PGC)

- **BS Computer Science (BSCS)**

Barani Institute of Sciences, PMAS Arid Agriculture University

• WORK EXPERIENCE

- **DeviceBee Technologies**

Remote — Dubai-based company · 1 year and 2 months

- Designed and deployed AI agents that automate customer support and multi-step business workflows, cutting manual handling time on repetitive client requests.
- Built automation pipelines connecting business tools and social media platforms — including AI-assisted social media account management — to remove day-to-day operational overhead.
- Delivered multiple client-facing websites and business portals end-to-end for international clients, using React.js and Chakra UI to build clean, production-ready interfaces.
- Shipped frontend work across four different industries — legal services, luxury yacht rentals, hospitality, and talent marketplaces — adapting each build to its client's real operational workflow.
- Converted design requirements into responsive, reusable React components, keeping UI/UX consistent across every project.
- Connected frontend applications to backend APIs and MongoDB/SQL databases to power dynamic, real-time content.
- Built and maintained REST APIs and server-side logic in Node.js, driving dynamic features across every client-facing portal.
- Owned Git and GitHub workflows across the full project portfolio, keeping version control and collaboration consistent for the team.

• KEY PROJECTS

- **Autonomous Customer Support Agent**

- AI agent that independently resolves customer inquiries and support tickets across chat channels, cutting response times and support costs.

- **AI-Powered Social Media Automation Suite**

- AI automation pipeline that manages social media accounts end-to-end — content, scheduling, and engagement — without manual upkeep.

- **Legal Platform & Business Portal**

- Web platform connecting users, businesses, and law firms to post legal issues, hire lawyers, and manage cases via secure chat and a business portal.

- **Nirvana Website & Portal**

- React booking platform for a luxury yacht rental company in Abu Dhabi, with tiered memberships, real-time bookings, and bilingual support.

- **Omniyat Food Ordering App**

- Cross-platform QR ordering app (Vue 3 + Capacitor) letting guests browse menus, place orders, and track order history in real time.

- **Nahham Web**

- Bilingual talent marketplace connecting companies with creative talents across the UAE, with OTP auth, Stripe payments, and offer management.
